Problem-Solution fit canvas 2.0

Purpose: Automate standard laptop orders with ServiceNow Flow Designer for faster, error-free IT procurement.
Team ID: SWTID-2026-1951 | **Team Members:** Nancy.D, Mythely.J, Srimathi.K, Sahasri.C

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

Who is your customer?
i.e. working parents of 0-5 y.o. kids

- Employees and new joiners who need a standard laptop
- Managers / approvers of hardware requests
- IT procurement and service desk team who fulfil orders
- Finance / asset team tracking spend and stock

6. CUSTOMER CONSTRAINTS — CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

- Budget limits and approval policies that differ by role
- Limited stock of standard models and vendor lead times
- Requests must go through the ServiceNow portal; some users have limited IT skills
- Audit and compliance needs; low-code approach preferred, no heavy custom scripting

5. AVAILABLE SOLUTIONS — AS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

- **Email / phone requests and spreadsheets:** familiar, but slow, error-prone and hard to track
- **Manual catalog item with manual approvals and tasks:** traceable, but IT must handle every order by hand
- **Direct buying by employees or departments:** quick, but bypasses policy and bulk pricing

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

Jobs-to-be-done

- Get a standard laptop quickly with clear status updates
- Get routine requests approved with minimum effort
- Place, track and close purchase orders accurately

Problems

- Long approval chains and waiting time
- Repeated manual checks of stock and budget
- Duplicate or wrong orders
- No visibility of request status

9. PROBLEM ROOT CAUSE — RC

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

- Standard laptop orders are handled like custom purchases, even though models and rules are already defined
- Approval, stock check and purchase order steps are done manually and in separate places
- No automated workflow exists to route requests and trigger tasks
- Policies live in documents and people's heads instead of in the platform

7. BEHAVIOUR — BE

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

- Employee emails IT or raises a form, then keeps chasing for status
- Managers approve late, often only after reminders
- IT staff check stock and budget by hand and raise the purchase order
- Indirectly: teams keep spare laptops or buy outside the process to avoid delays

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS — TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

New hire joining, laptop refresh cycle or breakdown, role change, or a manager requesting laptops for a team.

4. EMOTIONS: BEFORE / AFTER — EM

How do customers feel when they face a problem or a job and afterwards?
i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

Before: frustrated, anxious, unsure of status. **After:** confident, in control and informed through automatic updates.

10. YOUR SOLUTION — SL

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

Flow Designer flow triggered when a standard laptop catalog request is submitted:

- Validate requester and standard model
- Auto-approve if within policy, else send to manager
- Check inventory, then create purchase order / fulfilment task
- Update request state and notify the requester at each stage
- Route exceptions to IT for manual handling

8. CHANNELS of BEHAVIOUR — CH

8.1 ONLINE
What kind of actions do customers take online? Extract online channels from #7

Service Portal / Employee Center catalog form; approvals and status updates by email and Teams notifications.

8.2 OFFLINE
What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

Walk-up or call to the IT service desk, verbal request to a manager, collecting the laptop from the IT store.

Extract online & offline CH of BE
