Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	In many organizations, employees request standard laptops through manual catalog forms, emails and spreadsheets. Each request needs repeated manager approval, manual checks of stock and budget, and hand-off to the procurement team. This causes long delays, human error, duplicate orders, poor visibility of request status and a heavy workload for IT staff on routine, low-risk purchases.
2.	Idea / Solution description	Use ServiceNow Flow Designer to automate standard laptop orders end to end. An employee submits a request through a Catalog Item/Record Producer. The flow triggers on the request, checks the requester and laptop model against the standard list, sends an approval to the manager (skipped when within policy), checks inventory, creates the purchase order or fulfilment task, updates the request and notifies the requester at each stage. Exceptions are routed to IT for manual handling.
3.	Novelty / Uniqueness	A low-code, rule-based flow replaces manual routing: auto-approval for standard models within budget, reusable Flow Designer actions and subflows, built-in notifications and audit trail, and no custom scripting. Policy changes (new models, limits) can be made by admins without redeployment.
4.	Social Impact / Customer Satisfaction	Employees get laptops faster with clear status updates, improving productivity and onboarding experience. IT staff are freed from repetitive tasks to focus on higher-value work, and paper and email-based requests are reduced, supporting greener, more transparent and accountable processes.
5.	Business Model (Revenue Model)	Internal-value model for enterprises: savings from reduced manual effort and faster turnaround, fewer ordering errors and better bulk purchasing with preferred vendors. For service providers, it can be offered as a ServiceNow implementation package with subscription-based support and customization services.
6.	Scalability of the Solution	The flow is built on the ServiceNow platform and can be extended to other hardware (monitors, phones, accessories), software licences and other departments or locations. Additional approval rules, vendor integrations (e.g. via IntegrationHub/REST) and ERP or asset-management links can be added as subflows while handling growing request volumes.
