Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	100

Project Overview:

Project Name: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Project Description: A ServiceNow Flow Designer automation that streamlines standard laptop procurement by capturing an order request, validating the request, routing it for approval, and creating or updating the required procurement task records.

Project Version: 1.0

Testing Period: 05 October 2026 to 05 October 2026

Team Members: Nancy.D; Mythely.J; Srimathi.K; Sahasri.C

Testing Scope:

• Submit a standard laptop order request with valid details.
• Validate required request information and standard laptop criteria.
• Trigger the Flow Designer flow when a qualifying request is submitted.
• Route the request through the configured approval step.
• Create/update the procurement task and confirm the correct request status.
• Verify notifications and flow execution for positive and negative scenarios.

Testing Environment:

URL/Location: ServiceNow instance → Flow Designer → Standard Laptop Order automation

Credentials (if required): Authorized ServiceNow test user with access to the request and Flow Designer modules.

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	Submit a valid standard laptop order request.	1. Open the standard laptop order/request form. 2. Enter all required details. 3. Submit the request.	The request is accepted and the configured Flow Designer flow is triggered.	Request accepted and Flow Designer flow triggered successfully.	PASS
TC-002	Verify approval and procurement task automation.	1. Submit a qualifying laptop request. 2. Open the approval/task record. 3. Verify the generated procurement task and status.	The request follows the configured approval path and the procurement task is created/updated correctly.	Approval path and procurement task were processed correctly.	PASS

TC-003	Reject or submit an incomplete/invalid request.	1. Leave a required field blank or provide invalid data. 2. Submit the request. 3. Review flow behavior and messages.	Invalid data is prevented or handled according to the configured logic; no incorrect procurement task is created.	Invalid/incomplete request was handled correctly and no incorrect task was created.	PASS
TC-004	Verify notification and final status update.	1. Complete an approved laptop request. 2. Allow the flow to execute. 3. Verify notification and final record status.	The appropriate notification is generated and the r equest/procurement record reaches the configured final status.	Notification and final request/procu rement status were updated correctly.	PASS

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	No critical bugs identified during the UAT execution.	No reproducible defect observed in the completed test cases.	Low	Closed	All planned UAT scenarios passed.

Sign-off:

Tester Name: Nancy.D
Date: 05 October 2026
Signature: _____

Notes:

• All test cases cover both positive and negative scenarios.
• Tester feedback and execution results have been recorded.
• Bug tracking includes severity, status, and reproduction details.
• Sign-off is required from the project manager and product owner before deployment.
